Information on price adjustment for MR® brand products

Dear business partner,

we are forced to implement a significant price adjustment on short notice due to heavily raising raw material prices, availability of products and overall energy costs for our MR® NDT products.

The price increase of 12% will be implemented for deliveries as of 19th of April 2022.

In addition, we would also like to inform you that delivery delays or partial deliveries of your current orders may occur. If your order is affected, our sales team will coordinate this closely with you.

If you have any questions regarding this announcement, please contact your sales representative or our customer service office. We hope for your understanding and look forward to a continued good and cooperative partnership

Yours, sincerely

MR Chemie GmbH
